Do not eat, drink or smoke whilst applying, mixing or before washing hands and face and change of clothing.

Prevent drift onto other crops, grazing, rivers, dams or areas not under treatment.

Clean applicator thoroughly before using with other materials on desirable plants. Dispose of wash water where it will not contaminate food, crops, grazing, rivers or dams.

Rinse empty container three times with a volume of water equal to a minimum of 10% of that of the container. Add the rinsings to the contents of the spray tank before destroying the container by perforation and flattening and NEVER use for any other purpose.

Prevent contamination of food, feeds, drinking water and eating utensils.

### **Compatibility**

**GARLON 480 EC** is compatible with ACTIPRON SUPER\*\*, MAMBA\* 360 SL and MAMBA\* MAX480 SL.

### **Mixing**

For foliar applications, half fill the spray tank with water and add the required quantity of **GARLON 480 EC**. While filling the spray tank add ACTIPRON SUPER at the rate indicated below while maintaining constant agitation.

## Application

### A FOLIAR APPLICATION

Use only on actively growing plants with full leaf cover

- D Apply as a full cover spray to leaves and stems to the point of spray solution run-off.
- D Do not apply to wet foliage.
- D Avoid spray drift onto non-target plants.
- D Rain after application will have no effect on efficacy provided the spray has dried on the target plants.
- D Deciduous plants may drop their leaves when under stress. Do not spray target plants when drought signs are evident or showing signs of stress. Caution must be taken when applying foliar applications to deciduous plants during autumn to prevent rapid leaf drop as a combination of stress and herbicide application. Should this occur, provision should be made for follow-up treatments.
- D After a drought some plant species remain under stress and require a recovery period following rainfall. Signs of stress may not be evident during this recovery period. Allow time for plants to fully recover after rainfall before applying foliar treatments. Should foliar treatments be applied during this recovery period, provision should be made for follow-up treatments.
- D Use a knapsack sprayer with a solid cone nozzle (eg. Spraying Systems TG-1, Delavan CE 1 or equivalent type) that will ensure an even coverage of the target area. Maintain a constant pressure of between 200 - 250 kPa.
- D For linear application with tractor and boom, apply in sufficient water per hectare to ensure even coverage. This will be 250 – 350 litres spraymix per hectare depending on plant height and weed species.
- D For High Volume Application {Only with a foaming agent), use a motorized pump capable of applying pressures of 1,000 - 1,200 kPa - use a Spraying Systems Foamjet FJ 0006 aspirating nozzle. (or equivalent type.) Add commercially available foaming agent, (eg. Ecoguard's HERBIFOAM), as a temporary spray application marker.

## B. CUTSTUMP

- D Apply on the day of felling (within 12 hours).
- D **GARLON 480 EC** in diesel should not be applied to stumps if surface is wet from rain or dew.
- D Use solid cone nozzle tips (eg. Spraying Systems TG-1, Delavan CE 1 or equivalent type) at 100 kPa, (low pressure).
- D Apply mixture to the point of run-off according to directions for stump and cut stumps in the table below.

## C. BASAL BARK TREATMENT (For plants with stem diameter up to 10 em.)

- D **GARLON 480 EC** in diesel should not be applied to stems if surface is wet from rain or dew.
- D Apply by paintbrush or knapsack as a coarse, low-pressure spray using narrow angle solid cone nozzle. Apply all round to the basal stem or trunk of the woody plant from soil level to a height indicated, as well as to any exposed roots. In order to obtain satisfactory results a thorough wetting of the indicated area is imperative. Old or rough bark may require more mixture than young or smooth bark. In the case of multi-stemmed plants, each stem should be treated separately.

## TOEDIENING

### A. LOOFTOEDIENING

Wend slegs aan wanneer plante voile drag blare het en aktief groei

- D Dien toe as 'n volledige dekbespuiting op loof en stamme tot die punt van afloop.
- D Moet nie toegedien word wanneer blare nat is nie.
- D Na toediening sal reën geen invloed op die effektiwiteit hê nie, indien die spuitstof op die teiken plant gedroog het.
- D Verhoed spuitingstofwegdrywing na gewenste plante.
- o Bladwisselende bome mag hulle blare onder stremming verloor. Moet nie spuit as teiken plante enige droogtetekens of tekens van stremming wys nie. Wanneer blaartoedienings op bladwisselende bome in die herfs gedoen word, moet voorsorg getref word om vinnige blaarverliese a.g.v 'n kombinasie van onkruidododerbehandeling en stress toestande, te voorkom. Indien dit wel gebeur moet daar vir opvolgbespuitingsvoorsiening gemaak word.
- o Na reën, in opvolging van droogte, sal seker spesies steeds vir 'n tydperk onder stress verkeer en moet dus eers toegelaat word om te herstel alvorens blaarbespuitings gedoen word, selfs al is stress-simptome nie oor die tydperk opsigtelik nie. Indien blaarbespuitings wel gedoen word voordat die plante herstel het, moet daar vir opvolgbespuitingsvoorsiening gemaak word.
- D Vir rugsak toediening, vermy fyn druppelgroottes - gebruik 'n rugsakspuit wat toegerus is met soliede kegelspuitpunte bv. Spraying Systems TG1 (of soortgelyk tipe) wat egalige benatting van die teiken sal verseker.  
Handhaaf 'n konstante druk van 200 - 250 kPa.  
Handhaaf 'n afstand van ongeveer 50 em van die teiken vir gewenste benatting.

- D Vir toediening met 'n trekker en spuitbalk gebruik genoeg water om goeie bedekking te verseker. Hierdie sal 250-350 liter spuitmengsel per hektaar wees afhangend van die plant hoogte en spesies.
- D Vir Hoe Volume Toediening (Alleenlik met 'n skuimmiddel), gebruik 'n motoraangedrewe pomp wat 'n toedieningsdruk van 1,000- 1,200 kPa kan handhaaf - gebruik 'n Spraying Systems Foamjet FJ 0006 met 'n aspirende spuitpunt, (of soortgelyk tipe). Voeg 'n kommersieele beskikbare skuimmiddel by (bv. Ecoguard's HERBIFOAM), as 'n tydelike spuittoedienings marker.

D

#### B. **GEKAPTE STOMPESPUITING**

- D Dien toe gedurende die dag van afkap (binne 12 uur).
- D **GARLON 480 EC** in diesel meet nie toegedien word op stompe indian hulle nat is weens reen of dou nie.
- o Gebruik soliede keelspuitstukke (bv. Spraying Systems TG-1, Delavan CE 1 of soortgelyke spuitstukke) en handhaaf 'n druk van 100 kPa {lae druk}.
- D Dien toe volgens aanwysings vir stompe en gekapte stompbespuiting in label hieronder.

#### C. **STAMBESPUITING** (Vir plante met stamdeursnee tot 10 em)

- D **GARLON 480 EC** in diesel meet nie toegedien word op stamme indian hulle nat is weens reen of dou nie.

Dien toe met 'n verfkwas of met 'n rugsakspuit met 'n nouhoekige soliede keelspuitstuk as 'n growwe, lae druk bespuiting. Dien toe op die stamme van houtagtige plante reg random, vanaf grondhoogte tot 'n hoogte sees aangedui, asook op enige ontblote wortels.

Deeglike benatting van die aangeduide area is noodsaaklik vir goeie beheer. Ou of growwe bas mag meer spuitstof benodig as jong of gladde bas.

Waar meer as een stam per boom of struik voorkom, meet elke stam afsonderlik behandel word.
