

DOSAGES:

Add 150 ml of concentrate to 4 l of water. Apply thoroughly to the smelly areas of your artificial grass. The liquid solution of beneficial microbes will need to flush through the artificial grass and into the ground below. This is where the animal waste accumulates causing you smelly problems. For small areas under 1 m² add 100 ml of concentrate to a spray bottle with water. Spray liberally onto the area of concern.

Rain Harvest Tank: If you have a rain harvest tank empty the contents of the 1 l concentrate into your tank, allow 30 minutes to mix, then wet your artificial grass liberally.

APPLICATION:

A diversified team of naturally occurring microbes able to breakdown animal waste.

COMPOSITION:

20 different strains of free living microbes.

Bacteria: Gram + and gram - that degrade carbohydrates, protein & lipids with some representatives that can reduce levels of hydrogen sulfide. **Actinomycetes:** Soil bacteria that have the ability to degrade long chain polymers. **Fungi:** Unicellular & mycelial representatives that have the ability to degrade long chain polysaccharides, lipids & proteins, some under low oxygen tension.

HANDLING:

Do not ingest, ingestion may cause diarrhea. If ingested, drink lots of water. For skin contact, wash with soap & water. Please email us for MSDS and Technical Information. **Storage:** Store in a shaded, cool ventilated area. Temperature should not exceed 30°C. Keep out of direct sunlight. **Shelf life:** At room temperature the product should maintain its predicted activity for 12 months.

PLEASE NOTE: Application should only be done late afternoon or early evening. High temperatures will cause stress on the microbes which will reduce their ability to breakdown animal waste and other organic matter.

SmellAway Artificial Grass Concentrate will cause no harm to humans, plants or animals. Shelf life of 12 months when kept at room temperature and away from direct sunlight. Shelf life of 18 months if kept in a refrigerator.
