

Directions for use:

- Step 1:** Add water to the 7C pellets. Pellets swell and are ready to use within seconds.
- Step 2:** Tightly fill both halves of the **Air Rooting Ball** with the planting material.
- Step 3:** Prepare the branch by cutting through the outer layer (bark) all the way around with a blade or knife, about 25mm apart.
- Step 4:** Scrape off the outer layer to open an area where the new roots will form.
- Step 5:** Apply **Makhroroot No.3** Hormone Powder onto the scraped area and clamp on the **Air Rooting Ball** filled with planting material.
- Step 6:** Check for root formation through the translucent half of the **Air Rooting Ball**. Once roots have been established inside the **Air Rooting Ball**, cut the stem from the mother plant behind the **Air Rooting Ball**.
- Step 7:** Remove the **Air Rooting Ball** from the cloned stem and transplant it into soil covering the newly form roots.

Notes: **Makhroroot No.3** Hormone Powder helps to stimulate root growth, also used for plant cuttings.

If you plan to use both **Air Rooting Balls**, you can use the plastic bag to add water to the 7C pellets. Squeeze out excess water for desired moisture content.

Re-use the **Air Rooting Balls**.

Contents: 2 x Air Rooting Balls with cable ties, 2 x 7C Pellets, and 1 x 30g Makhroroot No.3
